Important service information, please read carefully !!

Dear Sirs,

Incorporated into your HUSS amusement ride, Type SKYTOWER, is a braking device GF III from the company C. Haushahn GmbH & Co.

In the pertinent regulations for lift systems, TRA, EN81 and the Directive EC 95-16 for lift systems, a *fixed relationship between travel speed and triggering speed (engagement speed)* is defined for arrester devices. Depending on the travel speed, the speed limiter must trigger the arrester device *not later than at 1.25 times the rated travel speed*. The Haushahn brake arrester device GF III was type-tested taking this specification into account.

To ensure the safety of your HUSS amusement ride SKYTOWER, we therefore urgently recommend to measure in particular the speed of the gondola *and of the control rope when carrying out brake arrester trials in the future*. Should it be found that the rated travel speed is being exceeded by more than 1.25 times, please contact our Service Department *without delay*.

Yours sincerely

HUSS Maschinenfabrik GmbH & Co. KG
